

ISODOORS BY ISOSTORE

[SOUND CONTROL DOORS]

IsoDoor is a line of quality high performance sound control doors manufactured entirely by IsoStore.

GENERAL INFORMATION

Our doors are fully tested for STC and OITC performance in the most accurate lab in the world. Our results are easy to replicate in the field with simple installation and redundancy within our seal design.

Each IsoDoor comes with custom jambs, full perimeter seals, a fully mortised automatic door bottom, an acoustic threshold, and a continuous hinge. The only element supplied by the end user is the door handle.

We offer several models of doors with our IsoDoor V, IsoDoor SD, IsoDoor HD, and IsoDoor HDLF. These doors are distinctly different with varying levels of performance to meet your project requirements. Our doors are flush panel by standard with options for glass kits in any number of configurations. The SD and HD models also allow for custom panel designs on one side of the door.

1 Quality Product

Quality manufacturing, built by hand with care at our own shop. We do not outsource our doors so we oversee every step of the manufacturing process from design to production to shipping.

2 Easy Installation

Standard wood jambs and easy to apply seals make our installation both cost effective and foolproof. No tricks to matching the results achieved in the lab and no experience needed to properly install one of our IsoDoors!

3 Factory Direct

We manufacture our doors here in Boise, Idaho and sell direct to our customers online. Avoid the inflated prices, no middle men here! Same quality and performance as the big guys at a fraction of the cost!
